

I October 2007

To the Pure Water Shop

Mt Barker Strawberries

This is a follow up to our first testimonial. We have had a hydrosmart on our bore water for about 7 years that irrigates the strawberries. Our bore water is about 1400ppm.

About a month into the 2006/07 season, we installed a second unit on the same line so the water gets treated twice to see if there would be a difference. After about 10 days, we saw some vigorous growth on the plants and the difference was that even in the extreme heats of January and February 2007 when the plants don't normally flower, they kept on flowering very well.

I would like to thank Paul and the team at Hydrosmart for all the success that hydrosmart has given to Mt Barker Strawberries.

Yours sincerely,

George Piliouras
