

Mataranka Primary School Northern Territory

13 October 2015

Hi Paul.

I am very happy with unit.

Mataranka is a tough place to grow lawn.

We have high lime bore water plus iron oxide as well extreme heat, poor soils and millions of wallabies.

So we wallaby proofed the school grounds and applied a lot of carbon rich fertiliser.

But you can tell the difference the hydro smart makes.

I have to mow every fortnight during the dry season which was unheard of and the lawn had started to yellow off a bit when hydro smart stopped working.

I thought it was fertiliser at the time, but lawn is now coming back to rich green again now the power supply is running.

Cheers, Anthony Heaslip.
