

16 September 2013

Hi Paul,

I missed out on being on site before the hydrosmart had arrived, but word from the guys here prior tell me they noticed a considerable reduction in calcium build up in our potable water line. Hot water systems were blocking up and the build up was evident on taps throughout the site. Since installing the Hydrosmart all our water issues have vanished and with it we have seen an improvement in the taste of the water as well as the water quality.

As my manager has said, "I can't explain it. But it works!".
