

To Hydrosmart

We put your water treatment into the North Blinman Hotel in the Flinders Ranges, if travelling it's a great place to visit in an old copper mining town in the Flinders Ranges SA, loaded with history and beautiful scenery.

It had just one downside it's hard limescale forming water supply.

We had the usual concerns about really being able to fix up water problems just with an electronic device existed when it was installed outside on the mains entry to the pub.

After a few weeks the scale marks in showers were coming away and the shower heads were not blocking up as they used to for years.

After a few months we note now that scum marks in the sinks and dishwasher in our commercial kitchen don't happen at as they always had.

Glasses washed in the dishwasher now come out without salt smears or stains as they used to.

Live in staff like getting clean now (not that they were dirty before !) as the shower water feels softer and is not hard or needing twice as much soap or shampoo as before our Hydrosmart was put on the mains supply.

Happy water, happy hotel, happy customers, come to Blinman !
