

November 20 2105

Hi Paul,

Apologies for the fact that it has taken me a while to get back to you regarding the Hydrosmart's we had installed here at Karrakatta Cemetery approximately 5 years ago.

As you are aware we have 4 Hydrosmart units installed, two on a 150mm bore supply line and two on a 100mm bore supply line. Since the installation of the units, the benefits which I have noticed have been as follows:

- A considerable decrease in the amount of time spent unblocking sprinklers around the cemetery site, particularly with gear driven sprinklers. Stations which required unblocking once a week during peak irrigation in summer prior to the units installation are now not needing to be unblocked. This has been particularly advantageous given that the cemetery has in excess of 200 reticulation stations.
- A decrease in the number of solenoid valves sticking on due to scale build up around the solenoid coil.
- A reduction in the amount of scale build up around the inner components of the variable speed pumps we operate at the cemetery.

Should you have any more queries please let me know.

Regards,

Dave.
